

## **Prefilter (particulate) and Afterfilters (coalescing) Elements**

Filter Technology, Inc.'s elements are designed with state-of-the-art filter media to fit directly into most existing compressed air/gas dryer prefilter and afterfilter installations without a costly filter retrofit or install kit. Our elements, which are engineered to offer exceptional economic value to our customers, are fully interchangeable with Allen, Arrow, Balston, Busch, Hankinson, Henderson, Ingersoll Rand, Johnson Controls, Orion, Pall, Pioneer, Pure Air, Ultrafilter/Comp Air, Van Air, Watts, Wilkerson, Zeks and Zurn.

Filter Technology, Inc. replacements are designed to meet or exceed the OEM specification. These elements offer wide compatibility, high performance and integrity with a long service life, and because of superior design, low initial pressure drops. For units with 2, 3 or 4 elements stacked on one another, we offer one-piece element designs of double, triple or quadruple lengths. This eliminates the possibility of leakage at the joints and shortens downtime.
